

EUROPEAN COMMISSION
HEALTH AND CONSUMERS DIRECTORATE-GENERAL
Public Health and Risk Assessment
Risk assessment

Apply your science skills to make Europe a better and safer place!

Join the team of top-notch scientists advising the European Commission!

Scientific advice plays a fundamental role in the EU policy-making process. The European Commission adopts its decisions and proposals based on the best and most authoritative scientific advice available. Therefore, the Commission now presents scientists with the rare opportunity to usher science out of the laboratory and into the policy-making arena. The EU Scientific Risk Assessment Advisory Structure on matters related to consumer safety, public health, and the environment is a place where cutting-edge science meets political and legislative power. This is the place where your scientific skills may influence the lives of millions by providing advice which is taken up in the drafting of new laws and regulations. This is the place where you will serve directly the whole of our society.

In addition to contributing to the EU science-based decision making process, your work for the Scientific Risk Assessment Advisory Structure will bring about a deep sense of personal satisfaction and professional prestige. The opinions that you will produce exert important impact on the overall scientific thinking in your area of expertise. In fact, those much-quoted opinions reach an unusually diverse, worldwide audience of scientists, politicians, legislators, stakeholders, industrial and citizens' organizations. The multidisciplinary and highly interactive atmosphere that permeates the work of the Advisory Structure allows for multiple contacts, open discussions, and collaboration between scientists including opportunities for dialogue with decision makers at the highest level. These stimulating work conditions often serve as an impetus for the generation of new policies and new scientific research ideas. Finally, advising the European Commission gives right to a financial retribution.
